PROFESSIONAL PROFILE

Developer specialising in Laravel and PHP for management applications and SaaS. Currently building backends, APIs, and web and mobile features at FleetX, a Norwegian logistics platform. I work with JavaScript, TypeScript and Vue on the frontend, and Flutter on mobile.

PROFESSIONAL EXPERIENCE

Full-Stack Developer | FleetX (Frakt24) | Norwegian TMS · January 2026 - Present

- Designed and built per-shipment emissions calculation (CO_2e, NOx, PM, CO and HC) following GLEC v3.2 and aligned with ISO 14083, with factors traceable to their sources.
- Built route profitability calculations combining fuel, driver salary and overtime, using exact decimal arithmetic and transactions to maintain data consistency.
- Built the drivers' timesheet end to end: an offline-capable Flutter app, approval in Vue and a Laravel backend connected to the tachograph and payroll.
- Integrated Firestore synchronisation, change history and automated tests.

Full-Stack Developer | Gesa Mediación S.L. | Murcia, Spain · September 2025 - December 2025

- Built an AI-powered nutrition app as the sole developer in four months: REST API, data model and business logic in Laravel, and the mobile app in Flutter.
- Integrated nutritional analysis of photos and PDFs with Firebase AI Logic, push notifications and real-time Firestore synchronisation.

Full-Stack Developer | Apuestas de Murcia | Murcia, Spain · February 2025 - June 2025

- Built ManagePoint to replace the previous system: management of venues, staff, furniture and terminals with Laravel, role-based permissions and PDF reports.
- Designed the database and optimised queries for reporting views.

IT Systems & Networks Technician | Ticarum | Murcia, Spain · March 2023 - June 2023

- Hardware maintenance, Linux administration and technical support.

SELECTED PROJECTS

Truekapp | truekapp.xyz | Own project in production

- Barter platform built with Laravel, real-time chat with Reverb/WebSockets, a Google Gemini AI assistant, semantic search and image moderation.
- Automated tests with Pest, CI/CD with GitHub Actions and deployment on a self-managed VPS with Nginx, PHP-FPM, Supervisor and Cloudflare.

VALO·DEX | valodex-app.vercel.app | Personal project with a public demo

- React and TypeScript SPA for browsing Valorant data. Integrates two APIs through a serverless proxy with caching and rate limiting.

EDUCATION

Higher Technician in Web Application Development | EFA El Campico, Jacarilla, Spain · 2023 - 2025

Technician in IT Systems & Networks | IES Las Espeñetas, Orihuela, Spain · 2020 - 2023

TECHNICAL SKILLS

Backend: Laravel, PHP, MySQL, REST APIs, WebSockets/Reverb, queues, Sanctum, Pest and PHPUnit.

Frontend: JavaScript, TypeScript, Vue.js, HTML, CSS, Astro, Tailwind CSS, Blade and Alpine.js; React in VALO·DEX.

Mobile & AI: Flutter, Dart, Firebase, Google Gemini (RAG, tool calling, embeddings and vision) and OpenAI API.

Tools: Git, GitHub Actions, Linux, VPS, Docker, Nginx, Cloudflare and Vercel. Multi-tenant architecture, SOLID and Clean Architecture.

Languages: Native Spanish · Professional English: daily use in meetings and technical presentations.
